Supplementary Online Content

eFigure 1. Clinical findings before treatment

eFigure 2. Noticeable improvement of the skin lesions with doxycycline, 100 mg/d

This supplementary material has been provided by the authors to give readers additional information about their work.
eFigure 1. Clinical findings before treatment. Signs and symptoms included erythema, papules, and pustules affecting the patient’s face. She also had blepharitis, reddening of the conjunctiva on the left eye, and corneal opacity on the right eye.
eFigure 2. Noticeable improvement of the skin lesions with doxycycline, 100 mg/d. This medication was discontinued and she had a flare that did not resolve despite restarting doxycycline.
