This supplementary material has been provided by the authors to give readers additional information about their work.
eFigure 1. OCT demonstrating paraneoplastic vitelliform retinopathy in right and left eyes of a patient with metastatic cutaneous melanoma. To the left of the scan, multiple irregularly shaped pigment epithelial detachments are seen throughout the macula.
eFigure 2. Wide-angle color photographs in the right and left eyes of a patient with bilateral diffuse uveal melanocytic proliferation (BDUMP). The patient had multiple systemic malignancies, including transitional cell carcinoma of the bladder and renal clear cell carcinoma.¹
